

Data Science and AI from bench to workbench

Prof. Jaak Vilo

Head of Institute of Computer Science
University of Tartu

AI beats humans

Boston Dynamics

ZenRobotics

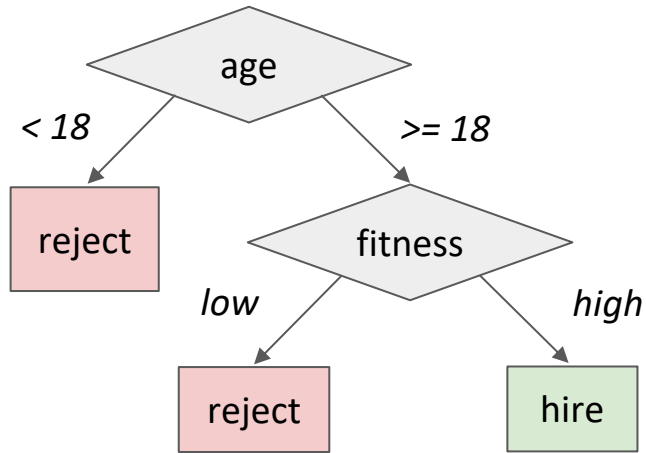

$X, Y \longrightarrow f$

f as ML “model”

Decision tree

$$f = 0.2 * \text{age} + 0.9 * \text{fitness} + 2$$

If $f > 25$
then **hire**
else **reject**

Linear regression

Neural Networks

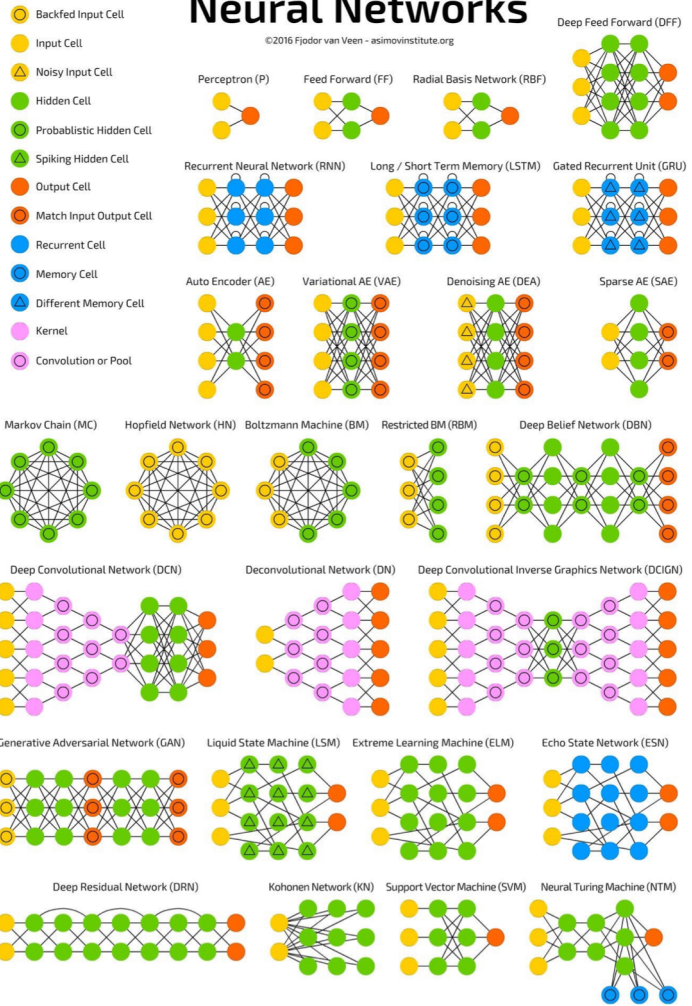

By Kimberly Cook | Email | Apr 3, 2019 | 9567 Views

Deep Learning, Artificial Intelligence (AI) and Machine Learning (ML) are some of the hottest topics right now.

Neural Networks

©2016 Fjodor van Veen - asimovinstitute.org

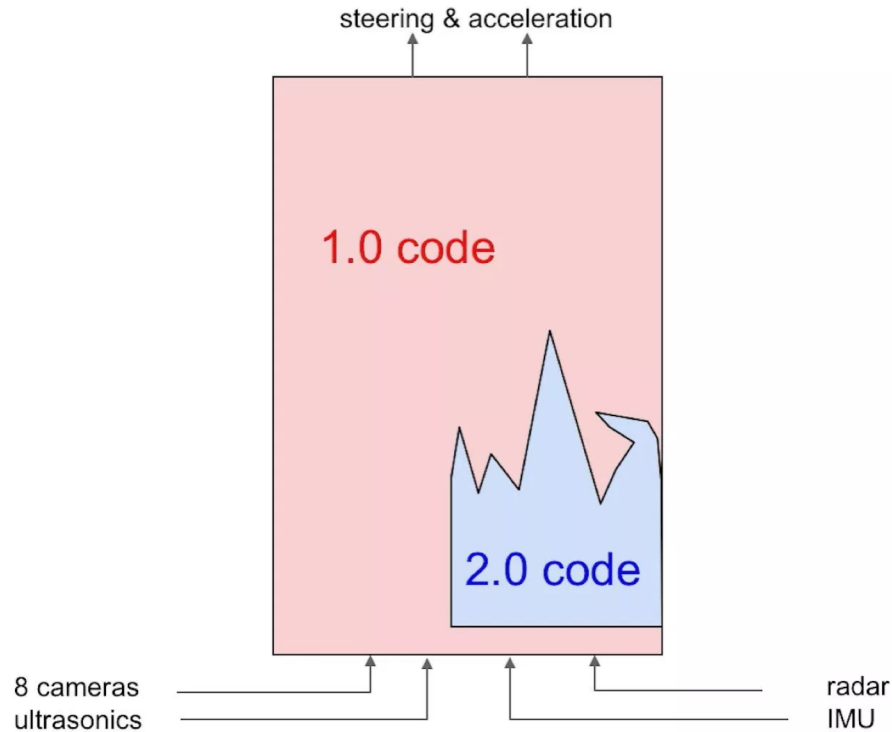

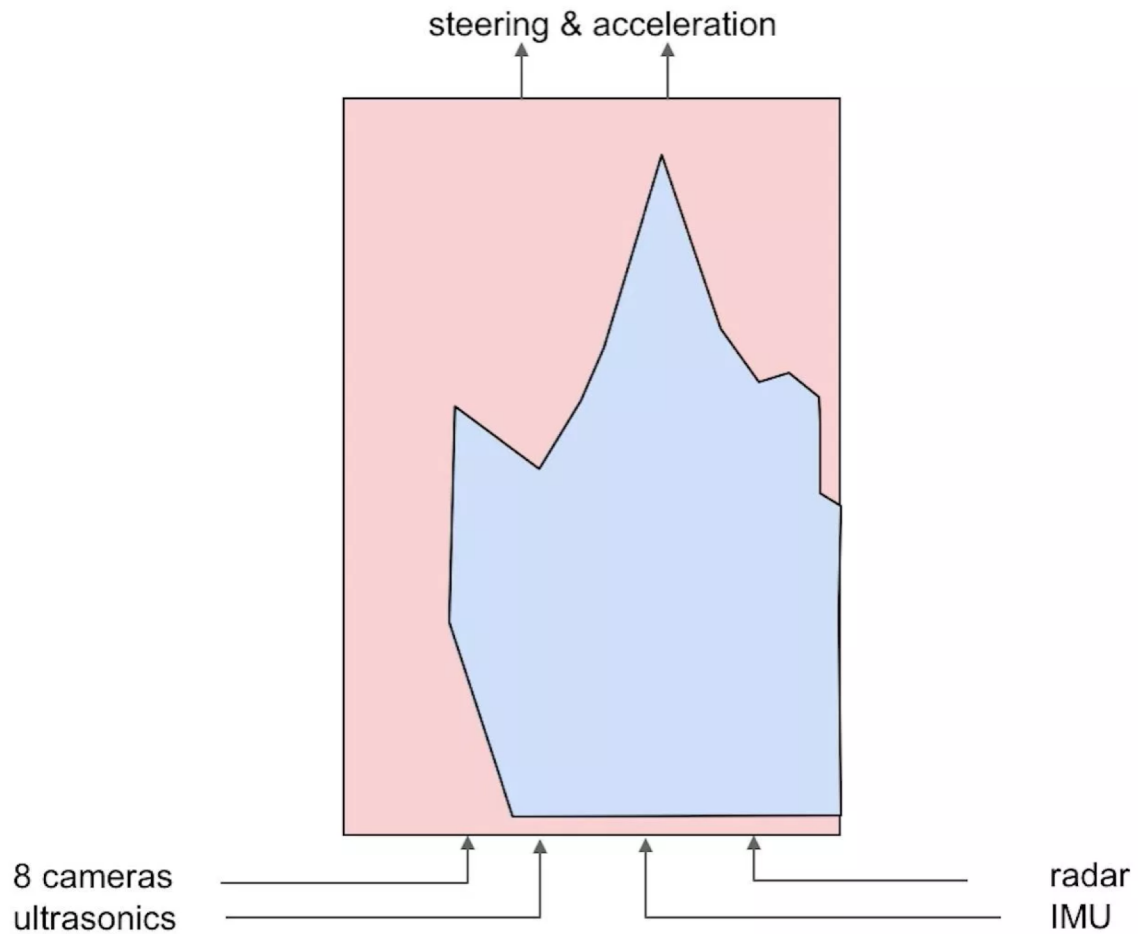

$$X \xrightarrow{f} Y'$$

Y' vs Y

Software 2.0 - example of Tesla (A. Karpathy)

Artificial “Intelligence”

1. Needs (a lot of) training data from the same context where it is applied
 - Collect all relevant data that is potentially useful
2. Requires the other part of software where it is “plugged in”
3. Should be applied to gain competitive advantage
 - Appropriate context and sub-tasks

Vehicle routing

Assign the delivery order of vehicles more efficiently.

Users

Supermarkets
& retail stores

Freight
transportation

Buses, taxi's
& airlines

Technicians
on the road

VehicleRouting benchmark (Belgium datasets)

Driving time

Average
-15%

Min/Max # datasets Biggest dataset
-9% 5 2750 deliveries
-18% 55 vehicles

OptaPlanner versus traditional algorithm with domain knowledge

5 mins Late Acceptance Nearby vs First Fit Decreasing

Don't believe us? Run our open benchmarks yourself: <http://www.optaplanner.org/code/benchmarks.html>

Expertise of the Institute of Computer Science

Big Data
Information Systems
Artificial Intelligence
Business Process Management
Machine Translation
Data Science
Machine Learning
Cloud Computing
Natural Language Processing
Software Engineering IoT
Cyber Security
Distributed Systems

Joint R&D projects

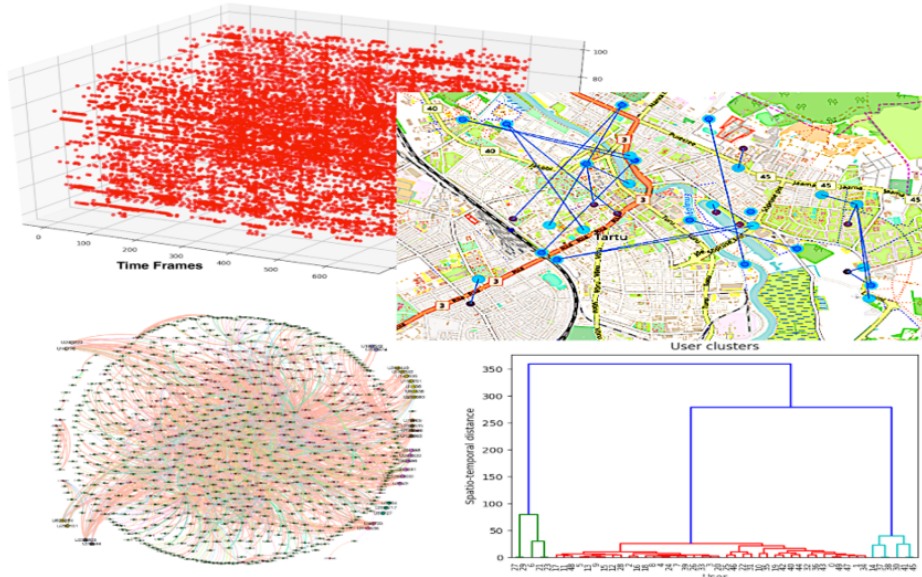

Software for analyzing cells on microscopy images

Methods and algorithms for advanced urban mobility platform

Population movement analytics, monitoring and prediction

MOONCASCADE

Remote sensing
control, security
system sensors and
software algorithms for
remote-controlled
vehicles

University-industry collaboration

Industrial Master's in IT

Delta Sandbox

DIH Tartu

University-industry collaboration

Industrial Master's in IT

Delta Sandbox

DIH Tartu

A unique programme in Estonia that offers students and companies the opportunity to collaborate throughout the curriculum in a form of an internship, practical course assignments, and Master's thesis while performing tasks that are relevant both to the company and the academic curriculum.

University-industry collaboration

Industrial Master's in IT

Delta Sandbox

DIH Tartu

Digital product innovation programme and space for experimentation for industry partners in collaboration with interdisciplinary Master's student teams.

Delta Sandbox is a member of Design Factory Global Network (dfgn.org).

University-industry collaboration

Industrial Master's in IT

Delta Sandbox

DIH Tartu

Supporting the digitalisation of Estonian industry by mapping the needs and ambitions of Estonian companies and creating necessary services and network for adopting innovative digital technologies.

By working together with other digital innovation hubs in Baltic Sea Region, DIH Tartu learns from digitally more mature countries and introduces methods and tools in Estonia by customising these based on the needs of the local industry.
