

Safeguarding Our Future by Reducing Energy Consumption in Housing Sector

Bisly

Building Intelligence Solutions

Cutting-edge building automation system

What does it do?

Bisly building automation system is an **intelligent system** of both hardware and software, connecting heating, venting and air conditioning system (HVAC), lighting, security, and other systems to communicate on **a single platform.**

Some of our customers

More than 20 000 automated control points installed to date with more than 500 000 transactions daily.

Bisly smart home functions

Display

Sauna

Ventilation

Cooling

Lighting

Video surveillance

Shades

Audio

Video intercom

Passes

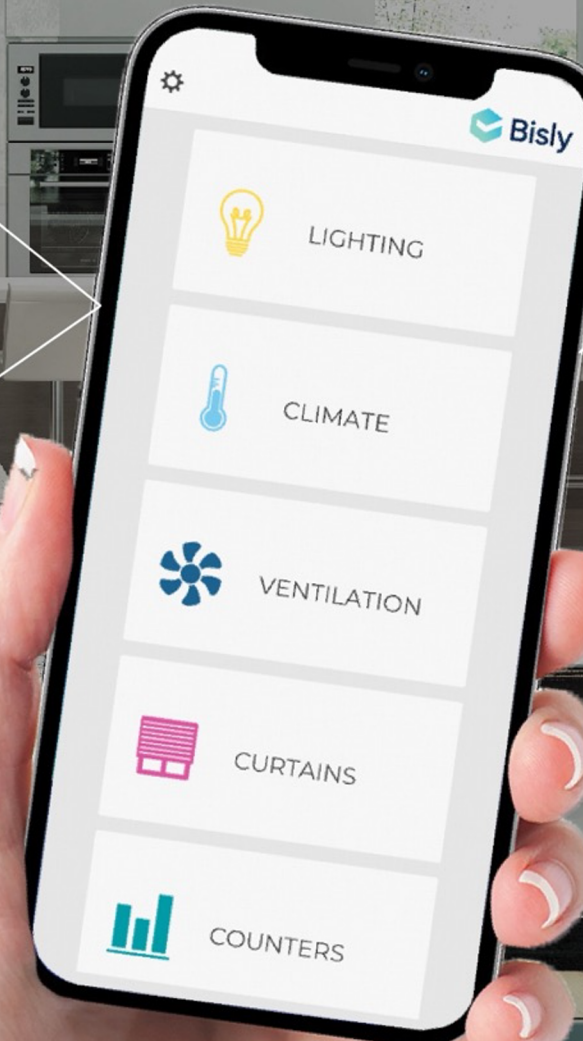

Security

Meters

Heating

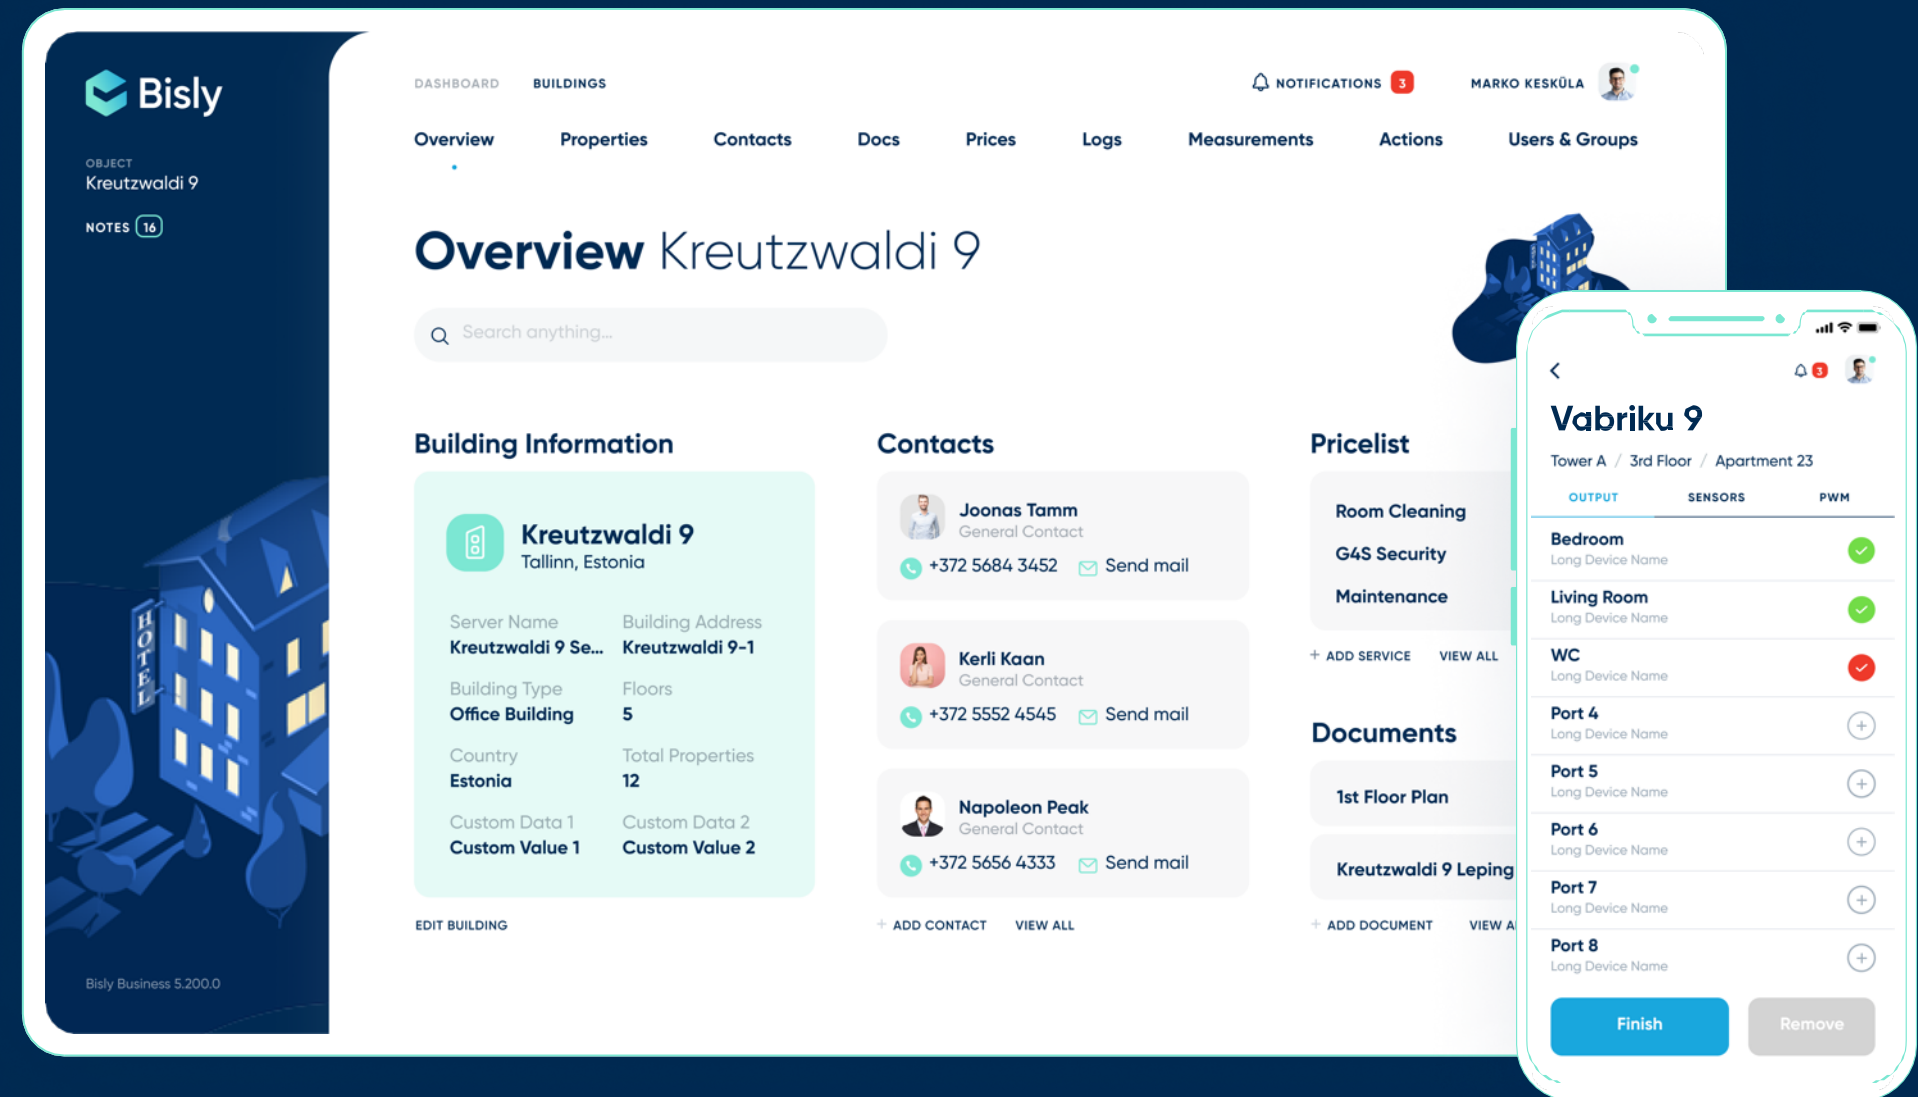

Bisly smart office functions

Bisly – Single Cloud Platform

Bisly cutting-edge proprietary hardware

Controllers

Touch screen

Sensor

Integrates through open standards with all available hardware on the market

Access control

Servers

Network

Sensors & switches

Works in perfect harmony with all available smart home gadgets

Amazon Echo

Google Home

Apple Homepod

We make saving energy simple

-  Providing better functionality, Bisly **hardware cost in all installations is 60% less** when compared to KNX and others
-  Cloud connected timeless hardware is **always up to date** and enables to continuously improve the user experience and energy savings
-  Scan to connect hardware and automatic building mapping architecture **reduce integrator pain and cost by 50%**
-  Through dynamic software and sensor feedback loop Bisly is able to get the most savings out of every installation being **38-46% more efficient** than competitors

Science and story behind the Supersensor

-  Co-operation between entrepreneurs and scientist in government supported program
-  Cross department collaboration within TalTech university contributed to the success of the project
-  Market prediction turned into a opportunity in swift response to post pandemic world

Bisly – we make saving energy simple!

Energy savings of up to 50% thanks to Bisly building automation...

Up to

5%

automated heating
management

15...20%

energy savings from
heating

10...15%

automated ventilation
management

25...30%

automated demand-based
ventilation management

Up to

50%

need-based lighting
control

According to the US Energy Information Administration, the building sector in the US accounted for 40% of all energy consumption in the country, 38% of CO2 emissions, and 36% of greenhouse gas emissions in 2017.

Products and specifications

Controllers

UM8 Pro
RS485, Dali, ModBus 8
putputs. 3xRS485,
4x digital, 4x analog i/o

UMD
2x250w Dimmable,
RS485, Dali, ModBus

Touch screen

10.1" HD Bisly screen
On wall and in wall mounting options.
POE, LAN (preferred), Wifi, Options for di
erent frame materials

Access Control

Modular reader NFC BT,
fingerprint, keypad.
Integrations with phono
panels (2N etc)

Sensor

Supersensor
Particles filter, CO2 sensor,
temp/humidity, lux, sensor

Servers

Server
Range of servers, from
support to 1 to 500 units
each

Network

Network
Standard LAN network
equipment with select
partners

Sensors and switches

Wide range of OneWire,
Analog, digital, sensors.
Compatible with all switch
series.
